### Sustainability Directive

We believe that to be in positive alignment with the Jada AI Evolution Project Charter, we must proactively work towards being in balance with our natural environment.

For this reason we have adopted the following operating practices:

- Exclusively using renewable energy sources.
- Developing Eco-friendly computing power and cooling technologies.
- Diminishing the carbon footprint of our business operations via remote work policies.
- Creating energy-efficient software programs.
- Embracing a circular economy by recycling and reutilizing hardware where applicable.
- Fostering a pro-environment culture within our organization.

We periodically contribute to private environmental healing initiatives that work towards the following:

- Offsetting atmospheric carbon emissions.
- Flora pollination efforts
- Reforestation projects.
